

Region: London and South East

Our teams and what they do

Our business is split in to 5 key areas, but for this region, you could find yourself working in one of the following, here's a brief overview on what they do;

Infrastructure:

Help us reimagine our places and spaces, from industrial facilities to airport-hubs, university campuses and the world's first tidal lagoon. Across all our markets, we touch every aspect of the social and economic framework. The type of work will include creating specialist civils drawings and detailed tasks/designs on sensitive, complex buildings. You'll be sharpening your skills on the latest digital technologies while pressing towards a carbon-neutral future.

Transportation:

By combining traditional engineering and new innovative technologies, our teams make journeys easier, safer and more reliable while supporting a greener and more productive society. Our work spans the full transport ecosystem, across rail, highways and local transport. You'll feel a sense of pride working with clients such as Highways England, Network Rail and Transport for London.

Aerospace, Defence, Security & Technology (ADS&T):

ADS&T work across safety critical industries to exploit cutting-edge advanced technology across aerospace and defence markets, helping clients respond innovatively to evolving external environments. ADS&T work with leading names to transform the future of aerospace engineering and support our national defence programmes across all domains: land, sea, air, maritime and cyber.

Whether it's mechanical, aerospace or systems engineering; advanced materials, finite element analysis or design – whatever your passion is, you'll be joining a high-end engineering team working on ground-breaking projects. You'll get the opportunity to work across design, systems engineering and structural analysis, you'll be equipped to face the future needs of the market.

Faithful+Gould:

Join the team that delivers project and programme management consultancy across the world. We build strong relationships by understanding the challenges our clients face, sharing their vision and helping them transform potential into reality. Our cutting-edge independent advice and guidance enables our clients to turn bold ideas into reality and deliver their most important projects and programmes.

You could work on large prestigious infrastructure projects with clients including TfL, Gatwick Airport and Thames Water, or focus on public building projects ranging from a primary school extension to a medieval fortress. We'll trust you to own your projects while supporting you to develop your skills and confidence.
