

## Region: Yorkshire and the Humber

### Our teams and what they do

Our business is split in to 5 key areas, but for this region, you could find yourself working in one of the following, here's a brief overview on what they do;

#### **Nuclear and Power:**

Join the teams that have been engineering, delivering, managing and decommissioning nuclear facilities worldwide for over 20 years, from new builds like Hinkley Point C to on-site engineering for clients such as EDF. We're driving evolution in the areas of offshore generation and transmission, energy from waste, electric vehicle infrastructure and the integration of smart grid technology. And we're also proud to play a part in reaching net-zero by 2050.

#### **Transportation:**

By combining traditional engineering and new innovative technologies, our teams make journeys easier, safer and more reliable while supporting a greener and more productive society. Our work spans the full transport ecosystem, across rail, highways and local transport. You'll feel a sense of pride working with clients such as Highways England, Network Rail and Transport for London.
